HOW

Main Learning

Technology is changing how portfolios are analyzed, constructed, and implemented. AI and the digitalization of assets are the two main triggers.

Question

How is wealth managed?

Implication

Modular investment and technology architecture integrating digital, AI, and programmable capabilities.

Practical Recommendations

Use modularity to expand portfolio capabilities, while preserving portfolio coherence.

A modular architecture enable wealth managers to combine asset classes, strategies, and technologies around specific client needs, while connecting capabilities across different providers and infrastructures. Each component should continue to be part of a coherent portfolio built around diversification, risk allocation, and resilience across market conditions.

Match new capabilities with the controls they require.

AI, digital assets, and programmable infrastructure expand what wealth managers can analyze, access, and execute. Their integration should extend the investment process accordingly, combining human judgment with the financial, regulatory, operational, and technical controls required by each capability.

Dimension

WHO

Main Learning

Managing wealth requires broader expertise across finance, technology, regulation, code, and digital-asset risk.

Question

Who contributes to managing it?

Implication

Specialization, modular expertise, and orchestration.

Practical Recommendations

Combine specialization with clear coordination.

Greater access to specialist expertise creates value when one adviser maintains a consolidated view of the client and connects decisions across financial, legal, tax, and family matters.

Manage interdependencies across the client's wealth.

Investment, financing, residence, succession, and governance decisions should be considered components of a single financial situation rather than as separate advisory processes.

Dimension

WHY (WHAT FOR)

Main Learning

Family priorities, wealth transfer, and increasingly personalized objectives are broadening what wealth management is expected to achieve.

Question

What is the wealth for?

Implication

Financial objectives connected to family purpose, governance, philanthropy, and impact.

Practical Recommendations

Use purpose to guide financial decisions.

A clear understanding of what the family wants its wealth to achieve should inform investment, liquidity, ownership, and structuring decisions while evolving as circumstances change.

Use governance to turn purpose into coordinated decisions.

Clear responsibilities, access to information, and decision processes help families and their advisers act consistently across generations and major transitions.

Dimension

PRINCIPLES

Main Learning

Swiss wealth management has developed cumulative strengths in trust, discretion, stability, specialization, service quality, long-term thinking, and adaptation.

Question

On what principles and values?

Implication

Apply established Swiss strengths to new assets, tools, and client needs.

Practical Recommendations

Use innovation to reinforce established strengths.

New capabilities create lasting value when they deepen specialization, improve client service, and strengthen long-term relationships rather than simply adding technological novelty.

Combine firm-level adaptation with a supportive financial center.

The development of Wealth Management 3.0 depends both on firms adapting their capabilities and on a financial ecosystem that supports stability, specialization, and innovation.

Wealth Management 3.0

These three models are cumulative rather than sequential: Portfolio management builds on custody, while Wealth Management 3.0 adds orchestration across a broader set of assets, capabilities, and objectives.

Dimension	Wealth Management 1.0 Custody-centric	Wealth Management 2.0 Portfolio-centric	Wealth Management 3.0 Orchestration-centric
Primary Objective	Protect assets	Grow a portfolio of liquid assets	Manage wealth across a growing number of asset classes, geographies, and generations
HOW	Physical and institutional custody	Allocation, diversification, and monitoring	Modular investment and technology architecture
WHO	Custodian/banker	Portfolio manager	Wealth manager as “Family CFO,” orchestrating specialist expertise
WHY	Safekeeping and transfer	Financial objectives	Financial objectives plus family purpose, inter-generational governance, philanthropy, and impact
PRINCIPLES	Swiss strengths applied to custody	Swiss strengths applied to portfolio management	Swiss strengths applied to a broader, more modular wealth-management model

Taking Wealth Management 3.0 Further

This chapter sketched a starting point rather than laying out a finished standard. It opens the door to new discussions to clarify and enrich the model. Wealth Management 3.0 may also change the economics of the industry. Modularity and AI can give specialized firms access to capabilities that previously required greater scale, while allowing expertise, technologies, and investment solutions to be combined to suit specific client needs. This could strengthen independent wealth managers, but their advantage will increasingly depend on their ability to select, integrate, and oversee these capabilities effectively.

The model also creates new dependencies, as greater modularity increases the need for integration, specialization requires stronger coordination, AI and programmable infrastructure introduce new operational and technical risks, and broader family objectives require clearer governance across individuals and generations. Innovation must also remain connected to the strengths on which long-term client relationships depend. Wealth Management 3.0 therefore requires firms to manage greater choice and specialization, while preserving coherence, accountability, and trust.

These questions provide the next agenda for Wealth Management 3.0. The model and practical recommendations developed in this paper now need to be tested across different wealth-management models, refined through practice, and developed into a broader set of best practices. The Edelvault Series will return in 2027 to continue this task, bringing practitioners and specialists together to challenge the definition, implementation principles, and emerging practices of wealth management. The objective is to create a shared compass that supports the profession, gives clients greater clarity, and strengthens the competitiveness of the Swiss financial center.

Speakers profile

Dr Marc Perrenoud, Historian and former Scientific Adviser to the Independent Commission of Experts Switzerland – Second World War (Bergier Commission)

Paul Noel, Founder, Swiss One Plus

Frank Häusler, CIO, Dreyfus Sons & Co Ltd, Banquiers

Roger Hartmann, Hartmann Advice

Alexander Petoud, CCO, SwissBorg

Philippe Kenel, Partner, Valfor Attorneys-at-Law

Trang Fernandez-Leenknecht, Founder, Holistik Family Office

Marc de Hennin, Partner, A&T Alpha-Credit

Lamine Brahimi, Co-founder and Managing Partner, Taurus

Giada Narducci, Women in Web3

Sheraz Ahmed, Founder, Storm Partners

Jérôme Bailly, President of the Board, Crypto Valley Association

Ilya Volkov, Co-founder and CEO, YouHodler

Olivier Ferrari, HUB+ member

Graziano Lusenti, Managing Partner, Lusenti Coninco

Fabian Dori, CIO, Member of the Group Executive Board, Sygnum

Anne-Grace Kleczewski, Kleczewski – Call the Human

Florian Lefort, Portfolio Manager, Capitelia Invest

Frank Crittin, CIO, MFM Mirante Fund Management

Robin Lemann, Head of Institutional Sales and Partners Business, Swissquote

Dr Andreas Janoschek, Founder, Gerevest.AI

Jean Rausis, Co-founder, Everything

Ninel De-Faveri, CEO, Finakey SA

Samuel Gheller, Founder, CryptoVitam.in

Eric Rabl, Founder, Everything

Gauthier Vila, Founder, Zyfaï

Biba Homsy, Founder, Homsy Legal

Tilmar Wilhelm Goos, Co-Chair, Crypto Valley Association Education Working Group

Gleb Kurovskiy, Co-Chair, Crypto Valley Association Education Working Group

Anthony Cohen Dumani, Président, Vaud Place Financière

Beyond the Paper

The discussion continues:

Watch: All the interviews and panels from The Edelvault Series are available online. <https://www.youtube.com/@edelvault/streams>

Explore: HUB+ members, Edelvault clients and partners, and TEK members can access the accompanying digital knowledge platform: edelvault.com/edelvault-series-wiki

Join: Edelvault, HUB+, the Crypto Valley Association, Allnews, TEK, and Women in Web 3 will continue to organize events around the future of the Swiss financial hub. Follow the partners' channels to stay in the loop.
